

MIT (1960)

Education: past and present

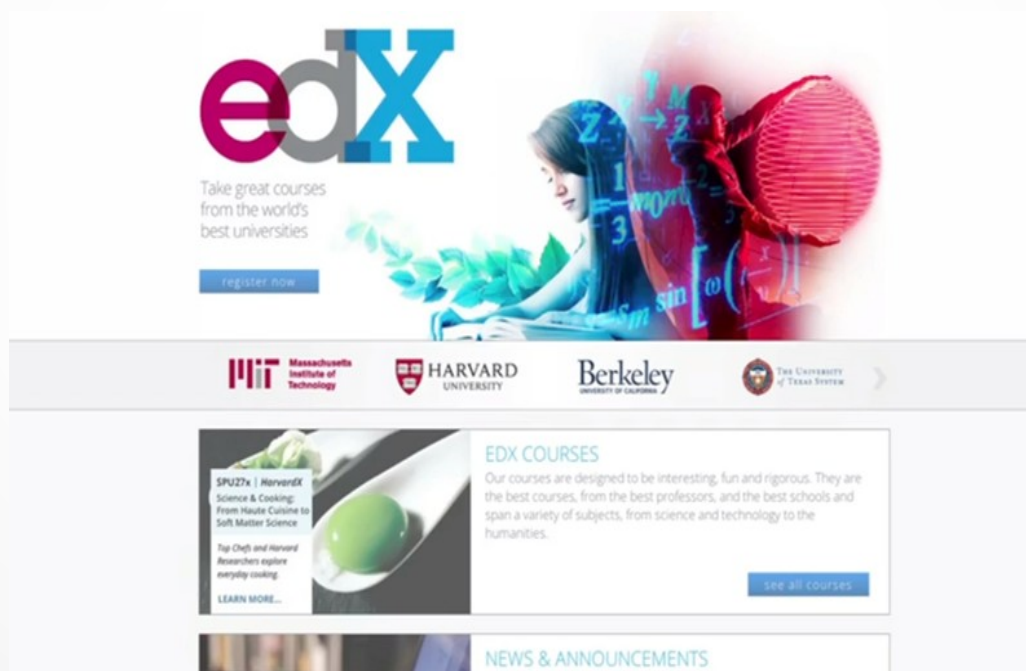

In spite of tremendous technological advancements, education hasn't really changed for centuries.

MIT (2010)

Using online technologies

Online technologies can transform education in both scale and access.

The banner features the edX logo on the left, with the text "Take great courses from the world's best universities" and a "register now" button below it. To the right is a stylized illustration of a person with long hair, overlaid with mathematical symbols like \sin , ω , and λ , and a red circular pattern. Below the main banner is a row of university logos: MIT Massachusetts Institute of Technology, HARVARD UNIVERSITY, Berkeley UNIVERSITY OF CALIFORNIA, and The University of Texas System. Below this is a section for "EDX COURSES" with a description of course quality and a "see all courses" button. At the bottom is a "NEWS & ANNOUNCEMENTS" section.

EDX COURSES
Our courses are designed to be interesting, fun and rigorous. They are the best courses, from the best professors, and the best schools and span a variety of subjects, from science and technology to the humanities.

The Funnel

Point of maximal interest

- Certification is highest for student who register near course launch.
- It rapidly drops for those registered later.

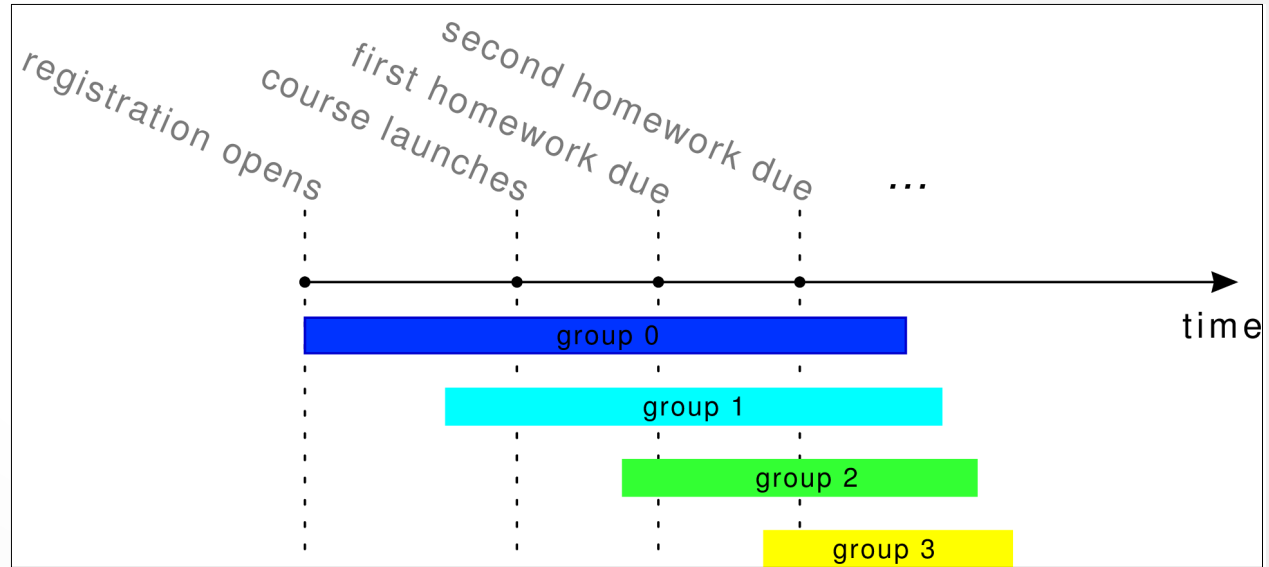

Course timeline

- Performance of late registrants (grp 2 & 3) suffers from shorter/missed deadlines.

Course timeline

- Performance of late registrants (grp 2 & 3) suffers from shorter/missed deadlines.
- Early registrants (grp 0 & 1) have to wait longer to get access to course content.

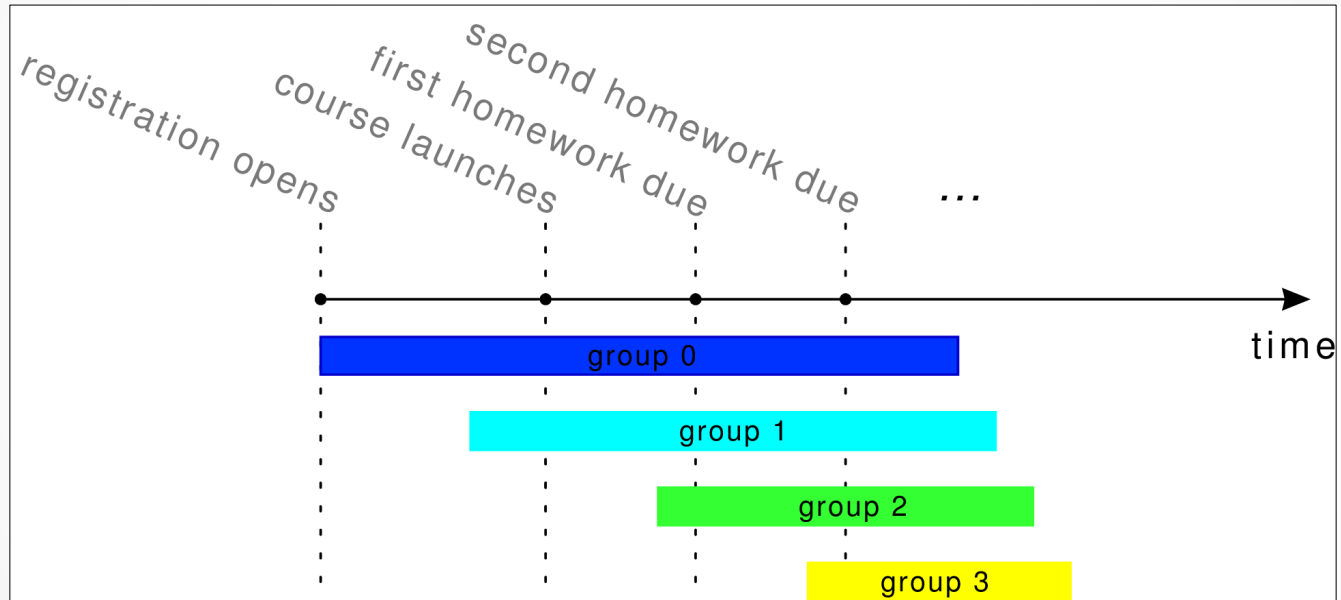

'course view' negatively affected by timeline

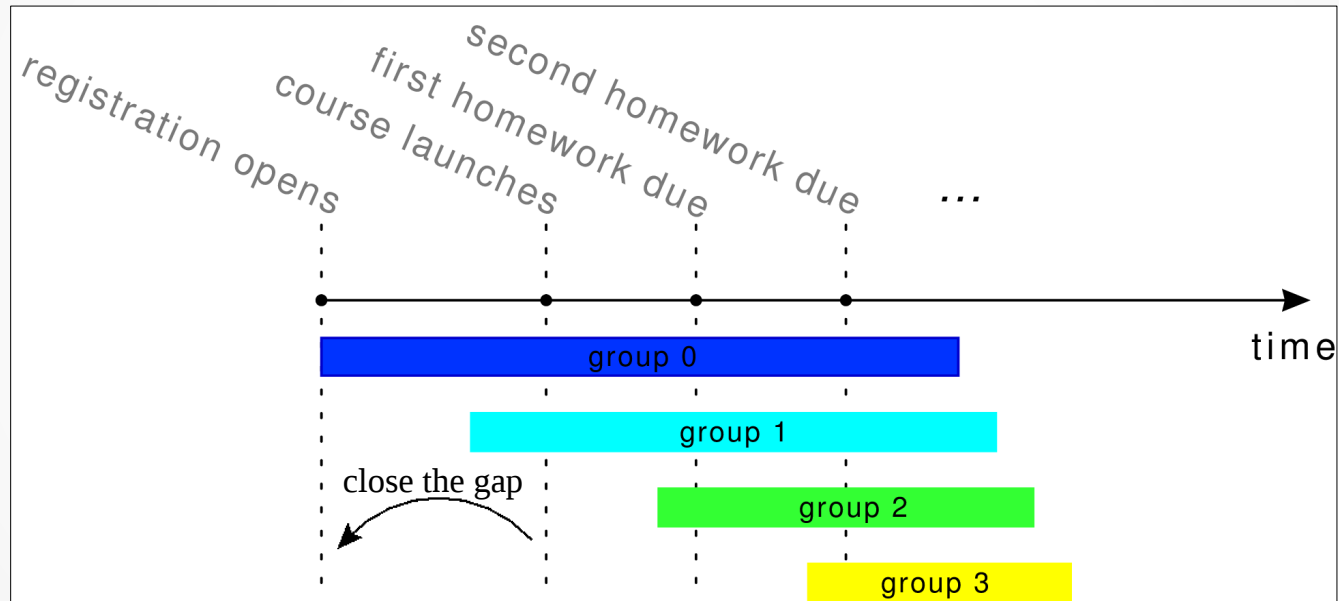

- Early registrants (grp 0 & 1) have to wait longer to get access to course content.

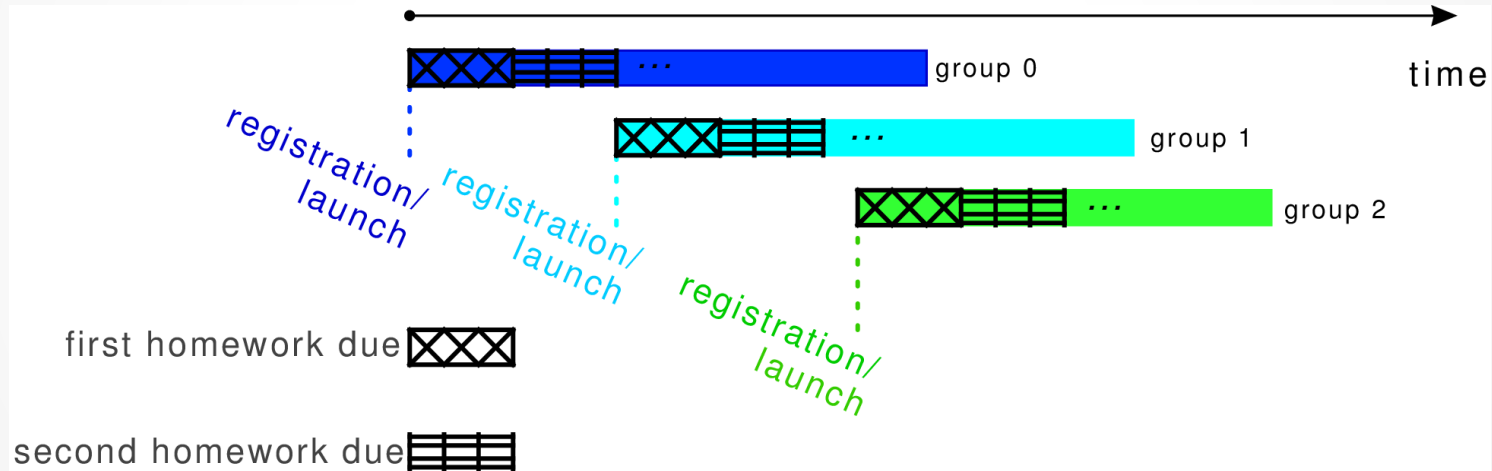

Current timeline

Current timeline

Synchronous timeline

Synchronous timeline

- Synchronous timeline interrupts communication among different groups of students.

- However, communication is irrelevant for student certification.

Summary

- Course timelines need to be synchronized with student registration:
 - Current solid timelines are against open design of online courses.
- 'Gender, age and level of education' have little relevance to 'certification'.
- 'Certification' should not be the focus in online courses:
 - 73% 'viewed the course content' vs 4% 'certified'

The dynamics of a doped hole in a cuprate is not controlled by spin fluctuations

Hadi Ebrahimnejad¹, George A. Sawatzky^{1,2} and Mona Berciu^{1,2*}

Understanding what controls the dynamics of the quasiparticle that results when a hole is doped into an antiferromagnetically ordered CuO_2 layer is the first necessary step in the quest for a theory of the high-temperature superconductivity in cuprates.

Predicting student churn

Data is aggregated from a series of 17 online courses offered in 2012-2013 by Harvard & MIT on *edX* (445000 active registrants).

Can we construct a churn predictor for student certification?

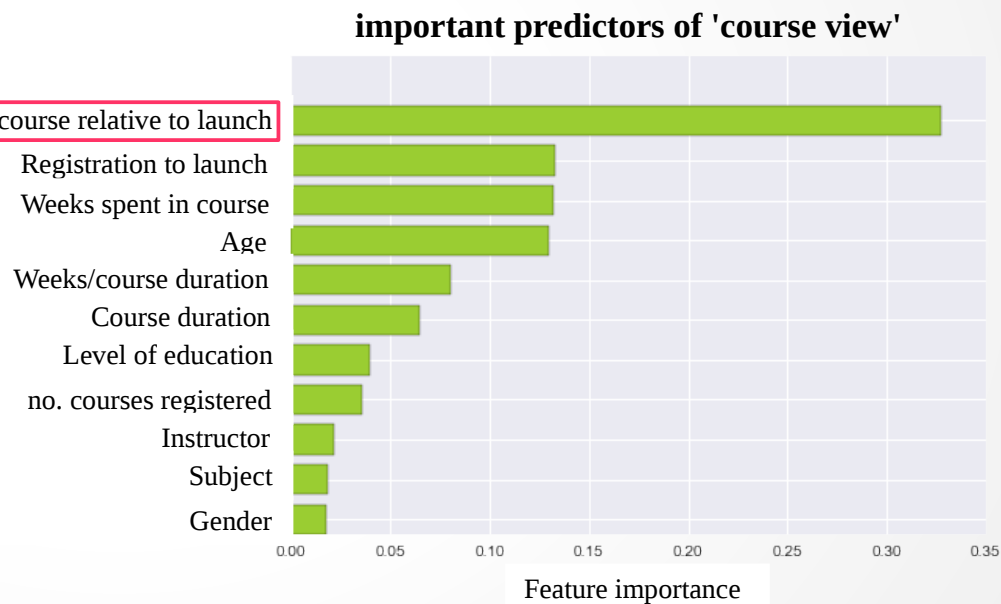

accuracy: 97%
recall: 97%
precision: 99%

RF classification of a balanced population

Predicting 'course view'

Last visit to course relative to launch

Effect of enrollment date

Certification rate rapidly declines after course launch.

	Before course launch	After course launch	Overall
Registration	48%	52%	100%
Certification rate	5.3%	2.6%	3.9%
Course view rate	65%	80%	73%
